Sheet metal is metal formed by an industrial process into thin, flat pieces. It is one of the fundamental forms used in metal working and it can be cut and bent into a variety of shapes. Countless everyday objects are fabricated from sheet metal. Thicknesses can vary significantly; extremely thin thicknesses are considered foil or leaf, and pieces thicker than 6 mm (0.25 in) are considered plate.

Sheet metal is available in flat pieces or coiled strips. The coils are formed by running a continuous sheet of metal through a roll slitter.

The future of sheet metal in the automotive industry will largely depend on the future needs of the industry.

With current tendency on lean manufacturing and cost cutting, the sheet metal forming process which suit that the most will be the most valuable to the industry. Thus, as an entrepreneur this project offers an exciting opportunity to you.
