Profitable Business
Ideas**

Introduction

Cottonseed, as the by-product of cotton ginning operation, is covered with fibrous lint. The cottonseed is mainly made up of inner kernel, usually called "meats". This meaty portion contains all the oil as well as proteins, and it is enclosed in the fibrous hull. Over the hull stick out the cotton fiber which escape the ginning and left on seeds. These cotton fibers are called "lint".

By processing cotton seeds, we can get maximum benefits. The inner kernel can be planted, fed to livestock, made into cottonseed oil for human consumption, used for fertilizer, or used in products like lotions and soap. The lint we get from cotton delinting has wide application in cotton blanket, sweat shirt, paper board industry and cotton pulp, etc. Therefore, the cottonseed delinter is very essential in cotton processing.

Methods of Cottonseed Delinting

Two general methods have been developed for removing the lint from cottonseed, which are removing the lint by acid and by delinter machine respectively.

The acid delinting of cottonseed has been used extensively, particularly when the seeds are used for planting. Both sulfuric acid and hydrochloric acid have been used for acid delinting respectively. Due to the generation of heat from the reaction of acid with the moisture, the short cotton fibers on the seed would quickly disintegrate. The residue can be washed away with water. After washing, the seed need to be neutralized with soda ash, lime or anhydrous ammonia, which is regard as the wet acid method. However, the concentrated sulfuric acid is extremely corrosive to machinery and dangerous to handle. Some serious problems could emerge, like consuming a large amount of energy to dry the seed and causing soil and water pollution.

World production in cottonseed has increased moderately during the past decade from about 36 million tons in the early 2000s to about 45 million tons in 2013-14. China is the largest producer contributing for about 29% of total output in the world. Production in India has increased rather steeply during the past 10 years from about 4.5 million tons in 2002-03 to about 12.3 million tons in 2013-14.

Cottonseed oil market is segmented by end-use application, raw material type and region. On the basis of end-use application, cottonseed oil market is segmented on the basis of retail, food processing, cosmetic applications and other industrial uses. The retail segment is centered on its use as a cooking oil.

Reasons for buying our report:

- **This report helps you to identify a profitable project for investing or diversifying into by throwing light to crucial areas like industry size, market potential of the product and reasons for investing in the product**
- **This report provides vital information on the product like it's characteristics and segmentation**
- **This report helps you market and place the product correctly by identifying the target customer group of the product**

- **This report helps you understand the viability of the project by disclosing details like machinery required, project costs and snapshot of other project financials**
- **The report provides a glimpse of government regulations applicable on the industry**
- **The report provides forecasts of key parameters which helps to anticipate the industry performance and make sound business decisions**

Our Approach:

- **Our research reports broadly cover Indian markets, present analysis, outlook and forecast for a period of five years.**
- **The market forecasts are developed on the basis of secondary research and are cross-validated through interactions with the industry players**
- **We use reliable sources of information and databases. And information from such sources is processed by us and included in the report**

Scope of the Report

The report titled “Market Survey cum Detailed Techno Economic Feasibility Report on How to Start Business of Cotton Seed Delinting, Crushing and Refining of Oil- Profitable Business Ideas” provides an insight into the How to Start Business of Cotton Seed Delinting, Crushing and Refining of Oil- Profitable Business Ideas market in India with focus on uses and applications, Manufacturing Process, Process Flow Sheets, Plant Layout and Project Financials of How to Start Business of Cotton Seed Delinting, Crushing and Refining of Oil- Profitable Business Ideas project. The report assesses the market sizing and growth of the Indian How to Start Business of Cotton Seed Delinting, Crushing and Refining Of Oil- Profitable Business Ideas Industry. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line. And before diversifying/venturing into any product, they wish to study the following aspects of the identified product:

- **Good Present/Future Demand**
- **Export-Import Market Potential**
- **Raw Material & Manpower Availability**
- **Project Costs and Payback Period**

We at NPCS, through our reliable expertise in the project consultancy and market research field, have demystified the situation by putting forward the emerging business opportunity in the How to Start Business of Cotton Seed Delinting, Crushing and Refining of Oil- Profitable Business Ideas sector in India along with its business prospects. Through this report we have identified How to Start Business of Cotton Seed Delinting, Crushing and Refining Of Oil- Profitable Business Ideas project as a lucrative investment avenue.

Free Instant Online Project Identification & Selection Search Facility

Selection process starts with the generation of a product idea. In order to select the most promising project, the entrepreneur needs to generate a few ideas about the possible projects.

Here's we offer a best and easiest way for every entrepreneur to searching criteria of projects on our website www.entrepreneurindia.co that is "Instant Online Project Identification and Selection"

NPCS Team has simplified the process for you by providing a "[Free Instant Online Project Identification & Selection](#)" search facility to identify projects based on multiple search parameters related to project costs namely: Plant & Machinery Cost, Total Capital Investment, Cost of the project, Rate of Return% (ROR) and Break Even Point % (BEP). You can sort the projects on the basis of mentioned pointers and identify a suitable project matching your investment requisites.
